### **DETAILED ACTION**

## **Drawings**

- 1. The drawings are objected to because the following reference characters are not labeled in an appropriate descriptive manner: reference characters "32" and "34" in Figure 1 and reference characters "301-305" and "310-330" in Figure 3.
- 2. Applicant is required to submit a proposed drawing correction of the above noted deficiencies in reply to this Office action. However, formal correction of the noted defect may be deferred until after the examiner has considered the proposed drawing correction. Failure to timely submit the proposed drawing correction will result in the abandonment of the application.

# Claim Objections

3. Claims 2, 8 and 15 are objected to because of the following informalities: the acronyms "VOB" and "UDF" should be defined in the claims before it is used as an abbreviation. It is suggested that the applicant change the claims to -- ... wherein the formatting is performed utilizing one of the group consisting of Video Object Format (VOB) and Universal Disc Formats (UDF)... --. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Dimitrova et al U.S. Patent 6,137,544.

Referring to claims 1, 7 and 14, Dimitrova et al. teach a method and system comprising a processing module and scene detection information storage logic operatively associated with the processing module (column 4, lines 29-37 and shown by reference character "210" in Figure 2A) and operable to identifying scene candidates from received video data (detecting significant scenes from the video content during the video analysis process) (column 2, lines 51-58), formatting the scene candidates for storage on optical storage media (selecting keyframes,

**Art Unit: 2173** 

representative of the scenes and storing them in a visual index on a storage media such as a DVD) (column 2, lines 37-38 and 58-65), the optical storage media having a recordable capacity (such as a DVD, CD or tape, which can be recorded) (column 2, lines 37-38), and storing the formatted scene candidates on the optical storage media in a media structure without reducing the recordable capacity (creating visual index while recording a tape) (column 3, lines 34-38).

Referring to claims 2, 8 and 15, Dimitrova et al. teach the formatting performed utilizing one of the group consisting of VOB and UDF formats (storing the data structure in numerous formats, such as MPEG, JPEG, or the like, which could include VOB and UDF, which are just types of data structures) (column 2, lines 66-67, column 3, lines 1-4 and 44-54).

Referring to claims 3, 9 and 16, Dimitrova et al. teach receiving video data from one of the group consisting of a video camera, video recorder, and a digital data stream (for example, video data from a tape or DVD) (column 1, lines 61-63).

Referring to claims 4, 10 and 18, Dimitrova et al. teach the media structure comprises disc control blocks on the optical storage media (storing the index on a DVD) (column 2, lines 66-67 and column 3, lines 1-4).

Referring to claims 5 and 11, Dimitrova et al. teach indexing the scene candidates after storing the scene candidates (creating a visual index from selectively chosen keyframes) (column 2, lines 59-65).

Referring to claims 6, 12 and 17, Dimitrova et al. teach the formatting includes indexing the scene candidates into a menu (table of contents) system (indexing the scenes into a visual index, or table, which can be displayed to and selected by the user) (column 1, lines 56-60 and column 13, lines 26-35).

**Art Unit: 2173** 

Referring to claims 13 and 19, Dimitrova et al. teach the logic implemented using software residing on a computer-readable medium (column 4, lines 29-37 and column 13, lines 25-28).

Referring to claim 20, Dimitrova et al. teach the logic operable to generate a list of scene candidates (visual index or table of contents) (column 1, lines 56-62).

5. The prior art made of record on form PTO-892 and not relied upon is considered pertinent to applicant's disclosure. Applicant is required under 37 C.F.R. § 1.111(c) to consider these references fully when responding to this action. The documents cited therein teach similar systems and methods for storing and formatting video content for indexing into specific points in the video stream.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ting Zhou whose telephone number is (703)305-0328. The examiner can normally be reached on Monday - Friday 7:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached on (703) 308-3116. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
